#	Level	Status	Type	Fixed-In Tag(s)	One-line description
1	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19 — CONST-046 i18n ar design; Option D (nicksnyder/go-i18n
2	High	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#1 — pkg/i18n core fo Bundle/Localizer + sentinel errors
3	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#10 — This task added texts shown in the command-line too those brief descriptions can eventual instead of being locked to English.
4	Medium	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#11 — challenges/pkg/ evaluators.go migration

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
5	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#12 — challenges/pkg/ challenge_recorded_ai_testgen.go × 1
6	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#13 — challenges/pkg/ migration
7	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#14 — challenges/pkg/ user-facing migration
8	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#15 — challenges/pkg/ challenge_recorded_mobile.go × 7 ur
9	—	Completed (→ Fixed.md)	Task	—	FIX-2026-05-19#16 — CONST-046 i18r doc
10	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#17 — This task addec the project's tracking document into PDF files, using standard document-c for team members and stakeholders needing to open raw text files.
11	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#18 — helix_code/cmd
12	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#19 — This task began (translation) support to the helix_qa component, so any text it shows to us other languages instead of only Engli
13	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#2 — CONST-046 audit scan 57,345 violations across 21,937 f
14	—	Completed (→ Fixed.md)	Task	—	FIX-2026-05-19#20 — CONST-052 ren (HXC-001 plan, ex-ISSUE-005)
15	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#21 — This task starte the LLMOrchestrator component, wh several different AI language models error messages were converted into

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
16	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#22 — This task began line text shown by the LLMsVerifier t model providers) into a translatable multiple languages. Only a small nur tool were converted in this first pass.
17	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#23 — This task starte HelixSpecifier tool so that its user-fac languages other than English.
18	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#24 — This task starte Storage component of the system, wh retrieving data, so its messages can e languages.
19	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#25 — This task starte LLMOps component, which manages language models the system relies or shown in multiple languages.
20	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#26 — This task starte VectorDB component, which is the da specialized AI-related data, so its mes multiple languages.
21	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#27 — This task starte Observability component, the part of health and performance, so its messa multiple languages.
22	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#28 — This task added module, the part of the system that c hardcoded English error and status r translatable format, fully completing left over.
23	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#29 — This task added component, converting five hardcode translatable format so the messaging different languages for users.
24	Medium	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#3 — This task built th individual sub-component of the syst system, including a working example Serbian. This lays the groundwork so remaining user-facing text across the

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
25	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#30 — This task added Middleware component, converting messages about authentication and translatable format.
26	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#31 — This task added component, the part of the system th converting five hardcoded messages sandboxing into a translatable forma
27	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#32 — This task added component, which handles live, real- converting five hardcoded connectio format.
28	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#33 — This task added groundwork to the Watcher compone file and event changes. This was a be component's outward labels are inte directly read.
29	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#34 — This task starte conversation component, which mar with users, so its messages can event
30	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#35 — This task added component, the part of the system th converting nine hardcoded status an format and reducing the number of that area from 73 to 64.
31	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#36 — This task added component's privilege-check feature, warning and description messages in reduction in the untranslated messag
32	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#37 — helix_code/cmd round 24)
33	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#38 — This task starte AutoTemp component so its message languages.
34	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#39 — This task starte Auth (login and authentication) com be shown in multiple languages.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
35	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#4 — This task conver templates used by the SelfImprove co asking the AI model to review and im translatable format.
36	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#40 — helix_code/cmd 4 round 27)
37	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#41 — This task added groundwork, including 36 translation PliniusCommon library, so that any t and can safely support many people
38	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#42 — helix_code/appl migration (Phase 4 round 30)
39	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#43 — helix_code/appl 29)
40	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#44 — helix_code/appl (Phase 4 round 31)
41	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#45 — helix_code/appl (Phase 4 round 32)
42	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#46 — helix_code/appl migration (Phase 4 round 33)
43	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#47 — helix_code/cmd round 34)
44	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#48 — helix_code/cmd round 35)
45	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#49 — helix_code/cmd round 36)
46	Low		Feature	—	FIX-2026-05-19#5 — This task conver messages in the HelixLLM tool into a

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
		Implemented (→ Fixed.md)			small new capability that other parts same kind of translation work.
47	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#50 — helix_code/cmd migration (Phase 4 round 37)
48	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#51 — helix_code/cmd migration (Phase 4 round 38)
49	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#52 — helix_code/inte 4 round 39)
50	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#53 — helix_code/inte 4 round 40)
51	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#54 — helix_code/inte round 41)
52	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#55 — helix_code/inte 4 round 42)
53	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#56 — helix_code/inte round 43)
54	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#57 — helix_code/inte round 44)
55	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#58 — helix_code/inte round 45)
56	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#59 — helix_code/inte round 47)
57	Low	Implemented (→ Fixed.md)	Feature	—	FIX-2026-05-19#6 — This task conver shown in the command-line interfac into a translatable format, so users o headers.

#	Level	Status	Type	Fixed-In Tag(s)	One-line description

365	—	Fixed (→ Fixed.md)	Bug	—	HXC-212 — A configuration fix lande actually listen on the network for the ever spoke over standard input and correct and was needed. The consequ network path it switched on tells eve may call it, on both the preflight and who is asking. So a weakness that wa is now reachable on a published port path by default. This is the classic pat defect activates a second one that wa why a change should be assessed for for what it repairs. The same any-ori sibling services in the main reposito this one because it lives in a separate closed while this instance remained. those siblings: check the origin again anything else, covering both the pref
366	—	Fixed (→ Fixed.md)	Bug	—	HXC-213 — A component that tracks deployment declares a lock for prote then uses that lock in exactly one pla seventy-eight others. This is the same elsewhere, and it is not speculative: a real race was previously detected he made at that time guarded only the s point at, leaving every other access u

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					though it is synchronised, which is m at all, because a reader sees the mech Concurrent deployment phases can t status, and a deployment can report remedy is the one already proven tw access to the shared record under the from any long-running call, and add detector.
367	—	Fixed (→ Fixed.md)	Bug	—	HXC-214 — Four provider integration method whose name promises only t health record and hand the caller a p than a copy. Two faults follow from o according to its name but writes in p places that assume it is safe, so the w concurrent callers overwrite each ot the live pointer rather than a copy, a given silently changes the provider's reasonably expect. The result is that when it is failing, or the reverse, and corrupt that judgement without ever matches the two fixes already landed under the lock and return a copy, the fails if the returned value is ever alia
368	—	Fixed (→ Fixed.md)	Bug	—	HXC-215 — The gate that checks whe be built reported a failure on two sep commit each time, and in both cases when the gate's own command is re- packages it reported as broken were commits changed, which was the firs these were real non-zero results at th a run that was cut short. What distin a reproduction is that it builds five co throwaway checkout, all of them sha reproduction builds one. That points consecutive builds rather than at any though the precise mechanism is not assumed. This matters more than an because the gate blocks releases: a ch teaches people to dismiss it, and the broken commit that habit will let the

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					make the gate produce the same verc input, and to prove that by running i tree.
369	Low	Fixed (→ Fixed.md)	Bug	—	HXC-217 — When an item is closed, t hold the location of the captured pro it and so that a machine can confirm closures that field instead contains a proved. The descriptions are substan underlying evidence does exist elsew missing and no closure is unfounded be verified mechanically: a check tha something real will report them as p indistinguishable from a closure witl ambiguity is the defect, and it matter well-documented closure from an en about the wrong one. The work is to description where it belongs, put the and add a check that refuses a closur resolve.
370	High	Fixed (→ Fixed.md)	Bug	—	HXC-218 — When the security scann supporting services, it checks whethe a network address from a host and a works, but modern IPv6 addresses co must be wrapped in square brackets container code does not do that wrap builds is malformed and the health c machine. A companion fix already re START goes through a different path was not covered, which means opera for what looks like no reason. The ob address is unsafe, because another p raw unwrapped form when deciding wrapping it would silently break tha properly is that operators running or the scanner normally instead of hitti means the start command completes exactly as it does on an IPv4 one.
371	High	Completed (→ Fixed.md)	Task	—	HXC-220 — A diagnostic script used t shared the same module name, wher was that it looked for the shorter nar

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					comparing the two names as wholes, them different was still reported as a corrected and behaves properly toda was ever added to keep it correct. Th check is easy to rewrite carelessly du comparison came back nobody woul engineer that finished work was unfi correct change. The project requires standing test that fails if the defect re still missing here. The people who be diagnostic to tell them the true state registered test exists that passes on th the loose name matching is ever rein
372	Medium	Fixed (→ Fixed.md)	Bug	—	HXC-221 — The agent component iss service. It builds each key from sixte randomness, which is correct. But if fails to answer, the code does not sto clock reading and hands back a key made that way is guessable by anyon issued, and the caller receiving it is t key and is accepted as one. The funct to its caller, so the ability to refuse sa likelihood of the randomness source this has gone unnoticed, but the cons starts issuing predictable credentials wrong. Failing loudly is the correct b an error can retry or abort, whereas no way to know it must. The fix is to reading, and to add a test that forces confirms no key is produced.
373	Low	Fixed (→ Fixed.md)	Bug	—	HXC-222 — The agent component has party libraries committed into versio toolkit and 1,037 under its plugin ser These are not our code. They are fetc registry using the manifest files that one of them can be recreated on dem stored. Committing them makes ever larger and makes it hard to see our o any routine dependency update rewr project already has a rule against ver

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					mechanism can regenerate, and the i folders, so nothing prevented them f tracking both folders, add them to th documented install step still reprodu — the last part matters, because rem recreation path is proven to work.
374	Medium	Fixed (→ Fixed.md)	Bug	—	HXC-223 — Before every commit, a c for markers left behind by a delibera where a working safeguard is tempo notices. Leaving such a marker in re blocking it is correct. But the same e it did, and that record necessarily q its proof. The check cannot tell the d broken and a written account of cod so it refuses the account. The two ru one demands the proof be captured, This is not hypothetical — it happene left out of its own commit, which is e quietly goes missing. The fix is to tea markers inside a recorded transcrip description of past work, while the s hazard. The check must keep refusin first, and must be tested against both everything or accepting everything.
375	—	Fixed (→ Fixed.md)	Bug	—	HXC-228 — When the whole system i checks its four mandatory dependen the fourth, the knowledge-graph com treats that as fatal, prints a boot-bloc start the dependencies by hand, and supervisor then restarts it fifteen sec knowledge-graph component has fin succeeds. The end state looks health but every cold boot produces a genu log, and fifteen seconds during which is that the service unit does not decla knowledge-graph component, so the same moment and the race is decide instruction the service prints when i operator to start the dependencies m starting and simply have not finishe

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					the supervisor waits, and to make th component that is still coming up rat permanent absence.
376	—	Fixed (→ Fixed.md)	Bug	—	HXC-229 — The multi-provider routi framework's debug mode rather tha startup log alongside the framework switched for production use. Debug prints every registered route at start logging on every request, and in this unsuitable for production because o detail it exposes in error responses. system supervisor as a long-running the production case the warning is a requests failing, which is why this h deployment is currently logging at d more internal structure than it shou correct it, an environment variable service unit is the natural place to se release mode when the service runs check that fails if a production unit
377	—	Obsolete (→ Fixed.md)	Bug	—	HXC-230 — Every time the Helix pla state, the HelixAgent service crashes on the automatic retry about sixteen problem: the infrastructure service the container engine has been asked Cognee knowledge-graph container can actually answer requests. Helix Cognee, is refused, treats the refusal Systemd then restarts it and the seco is that a restart of the platform alwa permanent restart count against the harder to spot; and if Cognee were e the platform would stay down instea 2026-08-06: a full stop and start of th failure seen in an earlier run from 2 infrastructure service wait for its co reporting success, rather than repor created.
378	—	Fixed (→ Fixed.md)	Bug	—	HXC-233 — When the HelixLLM gate local model server program called ll

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					program cannot be found. Searching worse than a misconfigured search p anywhere on the host, so this is not s pointing the service at the right direc as a warning and carries on without local model serving feature is absent is particularly wasteful because the g minutes downloading a large model serve it; the download succeeded and Observed live on 2026-08-06 during a requires actually obtaining and insta the service can find it; it also raises t should be downloading models at all consume them is not present.
379	High	Fixed (→ Fixed.md)	Bug	—	HXC-237 — The command the projec records, workable-items validate, run was last rebuilt on 27 July. A new saf 6 August: it refuses any closed item w actually lead to a real file. Because th that check is simply not present in th the source code containing it looks co running both against the same delibe with everything else held identical: t everything fine and exited successful correctly found and described the ba This matters because the checker is t unproven work from being marked f using it since 6 August carries less as means the ticket that introduced the The fix is to rebuild the program file, when the built copy is older than its s
380	High	Fixed (→ Fixed.md)	Bug	—	HXC-244 — The gateway is the servic talks to when it needs an AI model, a automated systems and on-call staff p address always answered "healthy" w and it would have answered exactly underneath. The cause was a single m collects health verdicts was created a was ever registered with it to check, and "healthy" was the only verdict it

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					cache, the vector store, the model ve all have been dead and this address fine. This matters more than a plainl with no health address is an honest one that asserts a state it never verif deciding where to send traffic, by su and by whoever gets woken at night. problem: the corrected code had bee program actually running was still th the source code reported success wh Everyone who depends on the platfo call responder most directly, becaus reflects reality. The outcome achieve names the four dependencies it chec really took, and a standing guard fai so the endpoint can no longer claim
381	Critical	Fixed (→ Fixed.md)	Bug	—	HXC-249 — The script the project ru reporting success on tests that never agent runtime and then waits for it t waited at the wrong address - the on verifier, happens to occupy. The veri anything it does not recognise, and t at all as proof the agent was ready, s up without ever having reached it. T the agent at that same wrong addres excused themselves rather than faili failures, the whole run finished with passed" having validated nothing. Th problem found in the same session, that could mislead, while this one is decides a release is good, and it was on this machine with nothing specia on a green validation run before shi being told the system had been chec readiness check confirm the identity that something answered, points the actually bound, tells them that in thi is a real failure rather than an accep executed zero tests fail outright. The

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					from this script means the tests genu and a run that validates nothing can
382	High	Fixed (→ Fixed.md)	Bug	—	HXC-252 — The automated check tha against drift gives the wrong repair i and following that instruction would same information in two places: a da copy, and a set of human-readable do check notices the two disagree, it tell documents into the database - which database is the side that is meant to b side that is meant to be regenerated. found, obeying the message would ha forty-six items with a stale document items outright and resurrecting eight trap is particularly dangerous becau already worried about consistency a exactly what the tool tells them. Any records is at risk, and because the los synchronisation rather than an accid long time. The expected outcome is t direction - regenerate the documents the tool's own advice repairs the disa loss.
383	Medium	Fixed (→ Fixed.md)	Bug	—	HXC-253 — Three automated safety c specific problems from coming back, ever ran them. Checks like these are problem is prevented from silently r particular behaviour and complains checking system has no automatic di runs if some other script explicitly ca never named anywhere. They had th looking like protection while providi been formally closed on the strength executed a single time. This is a quie makes the project's safety net appear present, discoverable by anyone bro coverage, while doing nothing. Every regression protection benefits from c a check that exists and a check that r The three are now called explicitly b

#	Level	Status	Type	Fixed-In Tag(s)	One-line description
					each was first proven able to fail befo a check that merely always passes. T that the sweep is started by a person checks now run whenever someone improvement but is not the same as
