ATM ID	Type	Status	Severity	Description
				supply-chain exposure must be assessed, not a them.
HXC-164	Task	Queued	—	The script that brings up the supporting servic directly, rather than going through the shared maintains for exactly this purpose. That compo the same way, gets the same health checking, a repeatedly. Bypassing it means this project car and has already caused one outage of its own. service startups still hide their errors, so a fail was flagged honestly in a commit message, bu obligation anyone will act on, which is why it i routing the startup through the shared compo hiding so a failed start is visible.
HXC-166	Bug	Queued	—	When publishing the agent component, the ho security advisories affecting the libraries it dep moderate and 19 low. These are known, public code the product ships and runs, so anyone wh our deployment too. Nothing here was introdu been accumulating and was surfaced by a rout unquantified for us specifically, because a pub code path is actually reachable in how we use full advisory list, separate the ones we genuin upgrade or replace the dependencies behind t triage is done we cannot honestly claim the co
HXC-168	Bug	Queued	High	The password used to reach the project databa setup and container files, and those files are pu accounts. Anyone who reads the project can re not introduced by recent work; the project's ov it as something that must be replaced, and tha depends on whether the same password is use has not been established either way and shoul value is already public, changing the files alon be changed everywhere it is used, and the setu configuration source rather than containing it cannot honestly claim its credentials are prote
HXC-169	Bug	Queued	Critical	The agent can run user-supplied code inside a drives that container through a third-party lib library affect exactly the parts we use — in pa operations — and for three of them the vendo so there is nothing to upgrade to. We confirme rather than merely shipping the library: an au own sandbox code to the affected functions. T

ATM ID	Type	Status	Severity	Description
				sandbox escaping onto the machine that hosts exists to prevent. What remains unknown, and can actually influence those copy operations in sandbox feature is switched on in real deploym written decision backed by evidence: either a unreachable in our configuration, or a concret feature, constraining the copy paths, or isolati no upgrade can close these, a deliberate decisi
HXC-171	Bug	Queued	Medium	A complete copy of somebody else's web applic it alone accounts for one hundred and thirty-n dependency security warnings, including thre be built or run: the startup configuration poin that folder, and its supporting packages have n two opposite ways at once. Because it is not bu we actually run today, which is why they rank references it, the setup is broken and misleadi recipe file, all one hundred and thirty-nine wa to whoever does it. Anyone reading our securi distortion, since it currently buries the small n The expected outcome is an explicit decision, r properly maintain and build it, or remove it an a reference to the upstream hosted service. Be approval, the decision must be put to the opera
HXC-172	Task	Operator-blocked	High	A small companion service we wrote ourselve part of the standard deployment, and it carrie supporting packages, two of them rated high. U warnings, these have no mitigating evidence i unshipped, because it demonstrably ships, and whether the affected functionality is ever exer place in the whole review where something w which makes it far more deserving of attentio three is not really an upgrade problem at all: i switched off unless explicitly enabled, so upda protection on would leave the exposure in pla deployment running this service benefit. The e assessment of the three warnings, the two stra protective setting explicitly verified as enable and the service rebuilt and confirmed working
HXC-175	Bug	Queued	Low	The cache that remembers model information where its clock was never configured. That fal the only way to build the cache always configu unexercised. On its own that is harmless. The r

ATM ID	Type	Status	Severity	Description
				if someone later edits it: a plausible-looking ch current time would make every cached entry a in the past that the freshness check reads as a expiry limit. Every entry would then be consid keep serving outdated model information inde The choice is to either add a small test that pin branch entirely and document that there is on
HXC-178	Bug	Queued	Low	When a caller presents an API key, the server c ordinary text comparison. That kind of compa that does not match, so a key sharing the first f reject than one that differs immediately. An att differences across many attempts can recover guessing it outright. Network timing noise mal is low rather than urgent, but it is a genuine w cheap: use the comparison function designed f amount of time regardless of where the differe introduced by recent work.
HXC-179	Task	Queued	Medium	The check that decides which websites may op deliberately allows requests that carry no orig behaviour, because only browsers send that in legitimately omit it. It is safe today only becaus away anyone without valid credentials. The tw nothing records or enforces that coupling: if so login check while working on something unrel information would become completely ungate work here is to add a check that specifically co the connection upgrade, so the dependency is
HXC-180	Task	Queued	Low	Three commits in the current release range do referred to a piece of data that was not added those three points gets a build error. The tip of corrected shortly afterwards. This cannot be re rewriting published history, which the project is for anyone hunting a regression by stepping three points that fail to build for a reason unre may wrongly conclude the fault lies there. The affected points and their shared cause somewh so the failure is recognised immediately as kno from scratch.
HXC-181	Task	Queued	Medium	HXC-160 corrected the 21 stale references to sc scripts/generate_fixed_summary.sh across the added the CM-SUPERSEDED-GENERATOR-NAM sets were deliberately left untouched and are t

ATM ID	Type	Status	Severity	Description
				Constitution.md still carries 14 references acro universal rules that projects other than HelixC records such as the Phase 5 Go-binary-shim pla is a governance amendment that CONST-049 re configured upstream, then re-cascaded and po session that closed HXC-160, and a canon amen drift than the stale wording, so the canon was 45 owned submodules carry cascaded restatem correction applied in the parent repo is delibe because the fix names a HelixCode-specific me wording into decoupled, project-agnostic subm them and violate CONST-051(B). The correct se neutral canonical wording that names the wor and push it in the constitution submodule per fleet and bump pointers. Who benefits: every c the anchor text, and any agent reading a subm summaries are produced. Acceptance: canon r wording, the change is pushed to every constit are re-cascaded, submodule pointers are bump SUPERSEDED-GENERATOR-NAMING both pass
HXC-186	Bug	Queued	Medium	Every shipped change must carry recorded pro by looking for the change's identifier inside the automatically stamp in whatever the project's were recorded. That stamp is an identifier of e evidence file written while the project happen by coincidence, be accepted as that change's pr completely unrelated. This has not yet happen made while the project sat at a position that re available to every recording the shared tooling accept only identifiers deliberately declared as incidental position stamp. This needs care beca acceptance from evidence already recorded, so quiet correction.
HXC-188	Task	Queued	Low	The main handbook that tells contributors and organised lists several folders at the top level t when only one is present, and refers to a top-le Anyone following it — a new contributor, or an orientation — will look for things that are not t broken or that they have checked out the wron of the document, which is otherwise the autho The correction is small and purely descriptive: section to match, then keep the two in step as t

ATM ID	Type	Status	Severity	Description
HXC-189	Task	Queued	Low	One of the external projects this codebase depe configuration still refers to it by its previous na hosting service silently forwards requests fron forwarding is a courtesy, not a guarantee: it dis project under the old name, and it is not honou dependency. If it stops working, fetching the pr name nobody recognises, which is unusually c project's current canonical name so the referer on a redirect continuing to exist.
HXC-190	Bug	Queued	Low	When a running command is cut short becaus says it was not a timeout. The check that sets tl the caller's own deadline, which usually has no stopped the command. Investigation showed tl either, because the internal signal it would cor cancellation and never a timeout, and the time mechanism entirely. The effect is that anyone c failure and no indication that a time limit was wrong place. A sibling code path that runs com correctly by doing it inside the timer's own cal copy.
HXC-191	Bug	Queued	Low	When a command is cancelled or times out, th but anything it started, by signalling the whole works if the command was placed into its own sandbox enabled — the normal configuration - sandbox switched off, the grouping step is skip operating system to signal a group that does no error is discarded. The result is a cancelled cor dormant, because the only configuration that c so no shipped path reaches it. It is worth fixing would appear only in an unusual configuration diagnose later.
HXC-192	Bug	Queued	Low	Output from a running command is read line l line may be. When a line exceeds that limit the permanently for that stream, because the buffe past it. Nothing else takes over the reading. Th until the operating system's own small buffer f someone to read. So one unusually long line, w readable output produce quite naturally, can w is to keep draining and discarding the remaind abandoning the stream, so the producing comr
HXC-193	Bug	Queued	High	

ATM ID	Type	Status	Severity	Description
				One of the small services we ship in a containe address on a specific port to confirm the servic impossible. The service reads no configuration that is supposed to tell it which port to listen o listens on the port the container publishes. An the check queries an address where nothing ca unhealthy no matter how well the service is ac replaces unhealthy containers will do so endle unrelated security advisories in the same serv nobody had exercised the health check since it
HXC-194	Bug	Queued	High	One of our own small services builds its web s that ships with the library it is based on. In doi at all may make requests to it, and it never che site visited by someone on the same machine c and read its responses. This is the same weakn the library's own toolkit, but because we hand upgrading the library would not fix ours — the problems that merely look alike. That distincti would make the warning disappear while leav the origin of incoming requests against a list o
HXC-195	Bug	Queued	Medium	The container definition for one of our service which network port to use. The service never r that value does nothing at all. The result is a se in the container definition where anyone woul effect — so a person adjusting it to move the se and would have no way to tell why. This also c health check were both written to match that i the service actually does. Either the service sh be removed and the real behaviour document worst of the three options.
HXC-196	Task	Queued	Medium	The handbook that describes this project's tech one of its networking libraries. Both parts of th because a security fix required moving off the deliberate; it is the handbook that is now wron a new contributor or an automated helper rea will confidently state a version that has not be same document has already been found descr additional inaccuracy makes the whole docum recorded version to what is actually in use, an reason, so nobody later reverts it believing the
HXC-197	Bug	Queued	Low	One test directory contains a duplicate of its ov files appear twice in the project at two differe

ATM ID	Type	Status	Severity	Description
				renaming exercise that moved a tree while lea the new one. Nothing reads the nested copy, sc anyone searching the project finds two results which is real, and any tool that scans for dupli blocks a useful check from being switched on: duplicates cannot be enabled while this one ex every run. Removing it requires first confirmi nested copy is genuinely the leftover and not t
HXC-198	Bug	Queued	High	A serious defect was recently fixed where runn process behind would hang forever and perma execution slots. A second function in the very s progress while they run, has the identical defe readers to finish before waiting for the comma path, so the same background process holds it commands in the background reaches this fun This is the sixth time in one working cycle that not to its sibling a few lines away, which sugge what else in the same file shares the pattern. T door, so this is a matter of applying it rather th
HXC-199	Bug	Queued	Medium	A recent change gave one part of the project a code could stop claiming the same identity. A d problem still exists searches for the old name a contains the old one as a prefix — so the check as unfixed even though it is fixed. Anyone re-r already done, and might undo the fix believing also still describes the old arrangement in thre the whole name rather than a fragment, and to what the code actually does now.
HXC-200	Bug	Queued	Low	A detector was written to catch a specific kind stuck trying to hand off a result nobody is colle one particular description of what the worker form of the same stall — where the worker wa rather than a single handoff — and the detecto demonstrated rather than theorised: a delibera went completely undetected while the detecto does catch is the historical one, so the guard is the newer structure while breaking its escape recognise both descriptions is a small change a defect rather than half of it.
HXC-201	Bug	Queued	High	The command the project's manuals give for re put them where it says. It builds the tool from path relative to the project root, but the build s

ATM ID	Type	Status	Severity	Description
				the output lands inside the tool's own folder in destinations and reports success, leaving the re stale, and it creates empty placeholder files in version of the same command that was outrigh is now worse: a visible error became a silent o previously found in that folder and attributed give an absolute output path, or to make the to regardless of where it was built, and then to up currently enforces the broken form.
HXC-202	Bug	Queued	Medium	A recent change taught the product to correctly combining them with a port number. It was ap address to listen on, but not in the desktop app address it connects to from the very same two address configured, the server starts up correc unusable address and cannot reach it — a failu is running perfectly. A second instance exists i analysis service. Neither is newly broken; both original change examined, so nothing was mad working cycle that a correct change was applie same thing nearby, which is worth treating as oversights.
HXC-204	Bug	Queued	Medium	Two long-running tests — one exercising heav one exercising leader election among worker r report failure when the machine is under load own. Measured: during a full test run both fail times consecutively, one finishing in roughly a about a twentieth. Their verdicts are therefore whether the product works. This matters most test run performed before a release is by defin these two will mark a healthy release as broke through. A third test with the same problem w inconclusive run report as skipped rather than the same treatment fits here. Both should wait than assuming a fixed time is enough.
HXC-205	Bug	Queued	Critical	A sibling component that manages automatica defect just fixed in its counterpart, with an add lock and uses it in two places, then writes prov checked times in three other places without ho no lock at all, because a reader of the code sees is applied throughout. The consequence is the — concurrent status updates overwrite each o when it has stopped or stopped when it is runn

ATM ID	Type	Status	Severity	Description
				same pattern after fixing the first one, and it is defect has had an unfixed twin elsewhere. The proven: hold the lock around the field writes o or the readiness poll.
HXC-206	Bug	Queued	Low	The newly-fixed health refresh deliberately re provider over the network, so that a slow or ha It then re-acquires the lock and only applies its changed underneath it. There is a narrow rem started again entirely within one probe, the ch applies a verdict formed against the previous i briefly reported unhealthy when it is fine, whi dangerous direction — reporting a stopped pr Worth recording that this is cheap to close rath incremented on each state change is invisible t to any published structure. An earlier note des was wrong and has been retracted.
HXC-207	Bug	Queued	Low	When a model provider record is created, its e shared template by reference rather than copi points at the same underlying settings, includi Nothing writes to those settings today, and the no corruption occurs at present — this was ver record it is that the protection now added to th manager cannot protect a structure shared wi legitimate, properly-locked write to a provider manager's view as well, and the locking will lo when the record is created removes the hazar
HXC-208	Bug	Queued	—	Four compose entries across two end-to-end te the Slack mock and the LLM-provider mock, b Any attempt to build those stacks therefore fai which means the containerised form of these t exercised. This was surfaced while fixing an u same two services: the fix could be proven at t against a running container, precisely because produced. That gap matters beyond these two process leaves the deployed-artifact layer unp failure the four-layer verification discipline ex Dockerfiles, or to remove the build entries if th run containerised, and then to prove the choic
HXC-209	Bug	Queued	—	The shell tool validates each command against does so on all three of its foreground paths. Th at all. Because the caller chooses background e the same tool, anyone able to request a shell c

ATM ID	Type	Status	Severity	Description
				background, and in doing so step around the e is therefore not merely weaker on that path, it interface and gives no indication that a differe found while fixing an unrelated hang in the sa judged it more serious than the defect it had b a hang costs an execution slot, whereas this co the background path through the same validat test proving a blocked command stays blocked
HXC-210	Bug	Queued	—	The shell tool accepts a working-directory para schema and in its foreground code path, but th that the schema never emits. The value therefo in the background executes in whatever direct the one the caller asked for. Nothing reports th fallback message, so a caller who relies on the workspace will see commands quietly operate range from confusing failures to a command s the more dangerous outcome because it looks parameter name the schema publishes, and to command actually runs in the directory it was parameter.
HXC-211	Bug	Queued	—	The hang just repaired was one instance of a p the same package, each able to park a call fore permits. Two sit in the synchronous execution sandboxing is switched off or when no timeou through documented usage rather than miscon streaming helper and are presently safe only b to rescue them, so any future caller wiring tha original defect exactly. A fifth site in the backg calling into this code with no timeout and no w found by sweeping the whole package after th the report, which was necessary because the r turned out to live in different files, so a review found nothing.
HXC-212	Bug	Queued	—	A configuration fix landed today made a small network for the first time, because previously no socket was ever opened. That fix is correct traced is that the network path it switched on may call it, on both the preflight and the respo weakness that was genuinely unreachable an port, and the container image selects that path a correct repair to one defect activates a secon which is why a change should be assessed for

ATM ID	Type	Status	Severity	Description
				what it repairs. The same any-origin weakness the main repository, but that sweep could not s separate repository, so the class was reported is the one already proven in those siblings: che and reject anything else, covering both the pre
HXC-213	Bug	Queued	—	A component that tracks the progress of a proc protecting its shared status record, and then u touching the same record in seventy-eight othe fixed elsewhere, and it is not speculative: a co was previously detected here by the race detec guarded only the single line the detector happ untouched. So the file now reads as though it i than having no lock at all, because a reader se Concurrent deployment phases can therefore deployment can report a state that never occu twice in this codebase: bring every access to th keeping the lock away from any long-running race detector.
HXC-214	Bug	Queued	—	Four provider integrations each declare a lock promises only to read, both modify their store pointer to that same record rather than a copy that reads according to its name but writes in assume it is safe, so the write happens under r each other. And because the caller receives the does to the value it was given silently changes could reasonably expect. The result is that a p failing, or the reverse, and that an unrelated p without ever intending to touch it. The remedy this pattern: perform the update under the loc with a test that fails if the returned value is ev
