

EVIDENCE

HXC-150 — QA evidence (§11.4.83)

Item: HXC-150 (Bug/Low) — tests/ddos env-var names mismatch .env.full-test causing false SKIP **Fix commit:** helix_code eefe78a2 (3 files; pushed github+gitlab) **Date (UTC):** 2026-07-12T17:20:00Z **Closure vocab:** Fixed (§11.4.33, Bug)

Root cause

The ddos harness bootRealServer read TEST_PG_/TEST_REDIS_ env vars but .env.full-test exports HELIX_DATABASE_/HELIX_REDIS_ with different defaults (user helixcode vs helix, password helixcode_test_password vs helix, db helixcode_test vs helix_test). So under the standard workflow the suite false-SKIPped even with healthy infra.

Fix

Moved envOr/envOrInt to always-compiled ddos_harness.go + added envOrHelix/envOrIntHelix helpers (HELIX_ first → TEST_ fallback → hardcoded default). Updated bootRealServer to use HELIX_ keys. 6 unit tests prove the 3-tier fallback.

Verification

go vet ./tests/ddos/... + go vet -tags=integration both clean. go test -count=1 -run TestEnvOr → PASS. Anti-bluff smoke clean.
