Governance Anchor Propagation Audit — Findings

Field	Value
Date	2026-06-22
Scope	All owned vasic-digital/ HelixDevelopment carriers + constitution/ + helix_code/ + assets/
Method	Read-only grep -l literal-anchor presence test (§11.4.6/§11.4.123)
Constitution ceiling	11 . 4 . 165 (root CLAUDE . md in sync)

Headline

The **entire owned-submodule fleet is frozen at 11 . 4 . 141** — the 11 . 4 . 142 → 11 . 4 . 165 band (24 anchors, incl. §11.4.162 OpenDesign, §11.4.157 GEMINI-lockstep, §11.4.163/164/165) **never propagated**. CodeGraph anchors 78/79/80 ARE present fleet-wide, so the last successful cascade predates 141.

Worst-lagging carrier sets (ceiling = 165)

Carrier	Highest anchor	Lag
submodules/claude-toolkit	none (0 anchors; only CLAUDE.md exists)	165
submodules/ pipeline_runtime	11.4.5	160
submodules/ dag_orchestrator	11.4.28	137
helix_code/ (inner app)	11.4.74	91
submodules/ doc_processor	11.4.97	68

Carrier	Highest anchor	Lag
assets/	11.4.102	63
62 other owned submodules	11.4.141	24
docs_chain	11.4.141 (also missing 11.4.80)	24 +

§11.4.162 (OpenDesign) gaps — CONFIRMED

Missing from: assets/CLAUDE.md, assets/AGENTS.md, assets/CONSTITUTION.md, submodules/helix_agent/CLAUDE.md, submodules/helix_agent/AGENTS.md. Fleet-wide, 11.4.162 is absent from every owned submodule's CLAUDE.md except constitution/.

§11.4.157 (GEMINI.md lockstep) — systemic violation

- GEMINI.md exists in **only 1 of 69** carrier sets (constitution/ alone). All 68 submodules with a CLAUDE.md lack their GEMINI.md sibling.
- Even constitution/GEMINI.md (otherwise at 165) is **missing the literal 11.4.80** while its CLAUDE.md carries it 6× → internal lockstep gap failing CM-COVENANT-114-80-PROPAGATION on GEMINI specifically.
- QWEN.md is also absent from ~48 submodules.

Structural finding

assets/ is listed as a wired submodule in root CLAUDE.md §3.2 but is NOT in the current .gitmodules — a wiring gap to confirm with the operator.

Prioritized back-fill plan

- **P0 (quick):** add 11.4.80 to constitution/GEMINI.md.
- **P1:** cascade 11.4.142 → 11.4.165 across all 62+ submodules' CLAUDE/AGENTS/QWEN via scripts/propagate-governance.sh + scripts/verify-governance-cascade.sh (covers 162/157/163/164/165); plus 11.4.80 for docs_chain.
- **P2:** create GEMINI.md (and missing QWEN.md) fleet-wide per §11.4.157.
- **P3:** full cascade-from-scratch for claude-toolkit, pipeline_runtime, dag_orchestrator, doc_processor, assets, helix_code; explicitly add 11.4.162 to assets/ + helix_agent/ carriers.
- **Structural:** confirm whether assets/ should be .gitmodules-wired.

Honest boundary (§11.4.6)

This audit proves anchor PRESENCE/ABSENCE, not that the cascaded text is byte-correct — the P1/P2/P3 back-fill must run `verify-governance-cascade.sh` afterward to confirm each anchor landed correctly fleet-wide.
